FXX.00 TRUCKING MANAGEMENT PLAN

In accordance with Section 107.08 and as follows:

For over-the-road dump trucks including, but not limited to, triaxles and dump trailers, prepare and submit a Trucking Management Plan for review and approval by the Representative prior to any trucking operations. At a minimum, the Trucking Management Plan shall include:

- Protocol for securing a comprehensive list of all dump trucks hauling onto the project for each shift.
- Plan to provide the truck drivers for each shift with a safety briefing in advance of the shift.
- Plan to inspect each truck for safety features prior to entering the work zone.
- At a minimum, all dump trucks shall be equipped with the following safety features:
    - Operational backup alarms
    - Operational 'bed up' or 'body up' alarms
    - Flashing lights and signs per Section 901.3(m)
- Checklist to be completed for each truck prior to each shift to ensure that the above-referenced safety features are operational.
- Plan to ensure bed down verification before the dump trucks leave the dumping location and/or work zone.
- Plan to ensure continued operation of all safety features throughout the shift and subsequent removal of a truck from the project if a safety feature is no longer operational.
- Plan to manage ingress and egress between the work zone and live traffic lanes to minimize traffic impacts (i.e. signing, flagging, staging, queuing, bunching).
